REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art does not fairly disclose, teach or suggest the method of dispensing tokens from a storing bowl having a rotating disk, including providing a plurality of tokens, restricting a convex section circular opening in a convex section of a storing bowl, above and adjacent the rotating disk, having a diameter of between approximately three and five times the predetermined diameter of the tokens, moving the rotating disk to receive and release individual tokens from the plurality of tokens in the storage bowl at a rate of rotation to create a loose bridge-like structure of tokens in the storage bowl across the circular opening to intentionally restrict the flow of tokens through the convex section and reduce a bulk token weight loading on the rotating disk relative to a storage bowl having an opening greater than five times the predetermined diameter of the tokens.

Although the prior art, as exemplified by Kurosawa (US 6,569,006 B1), recognizes the bridging problem and presents solutions for its removal, none of the prior art discusses the intentional creation of a bridging phenomena in a token storing bowl in order to prevent overload of the bowl motor as claimed in Applicant's Independent Claim 23. Raterman (US Re. 34,934) discloses using a storing bowl having a convex structure similar to Applicant's, but does not disclose a formula for its dimensioning, nor its use in creating the bridging phenomena.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
